P_LVLFLG - SUBSET FLAG FOR PARENT-LVL SP ROST-P2

Type	Code
Measurement Unit	numeric
Description	Note: Data for the Parent Study was collected from parents of Add Health Sample Members. The data is being released, however, organized by the AID of the Add Health Sample Member. If a given parent has more than one child who participated in Add Health, that Parent's record will appear more than once in the Parent2 and SP2 files. Likewise the roster files are repeated for each Add Health Sample member belonging to the parent. If users prefer to use a roster file that contains only one roster per Wave 1 Parent, they can use P_LVLFLG=1 as a subsetting condition.
P_LVLFLG	Subset flag for Parent-Level Spouse Partner Roster

1	subset this record for parent-level file
